**IN THE SPECIFICATION**

Please amend the ABSTRACT on page 24 of the specification to the following:

A method of recording an encoded bit stream, the said encoded bit stream representing a plurality of video objects comprising a sequence of cells together constituting a part of an MPEG2 Program Stream, on a disc like record carrier, such as an optical disc. The method comprising recording video objects comprising a sequence of contiguously recorded cells, each cell comprising a unique cell identification number within a video object, recording a playback sequence of cells defining a playable program chain of cells, wherein the said sequence comprises references to the cell identification numbers and recording navigation data within the said cells comprising an end time of presentation of the corresponding video object.—

—————The method further comprises recording at the end of a video object a dummy cell that is not being referenced by a playback sequence.
